

PLANTING A MIYAWAKI MICRO-FOREST

INTRODUCTION

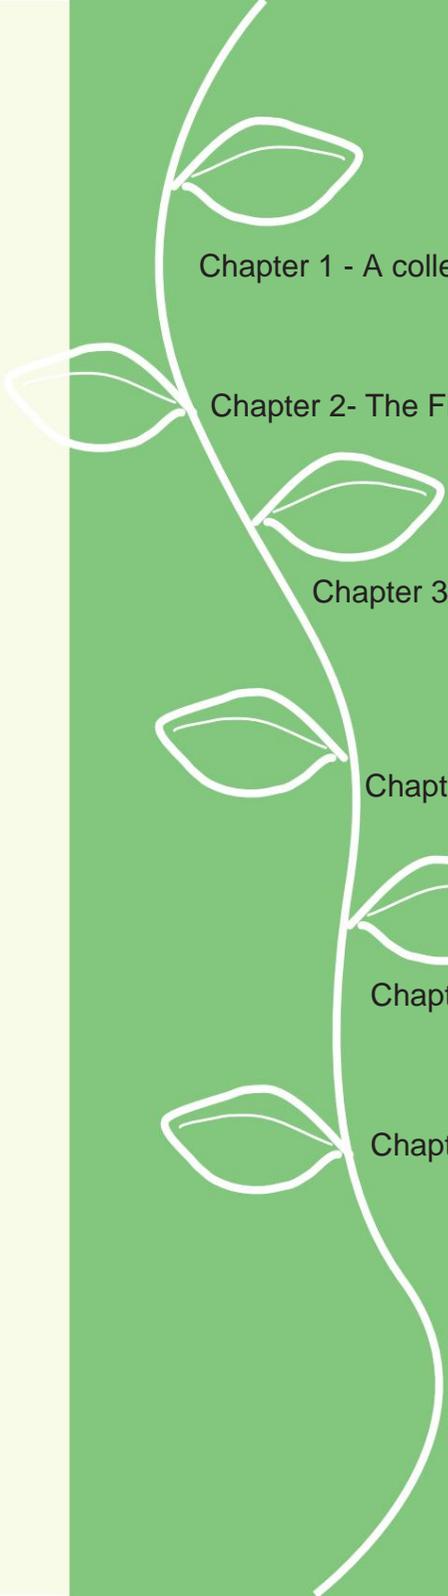

Why the miyawa'kit?

We wanted to write this training kit to allow everyone to learn more about the different aspects of a Miyawaki plantation. This kit is composed of different chapters that can be read independently or together, depending on your preferences.

This kit was created by members of the Toulouse micro-forest collective.

It is based on our planting experience, which is just one of many. You can find other sources of information from organizations such as Boomforest, MiniBigForest, Afforestt, etc.

Our goal is to create a guide that is as practical and pragmatic as possible for applying the Miyawaki method to a planting project in an urban or peri-urban area. These chapters may lack theoretical and historical input on the Miyawaki method; you can find this on the Arboretum website.

Chapter 1 - A collective project

Chapter 2- The Field

Chapter 3- Essences

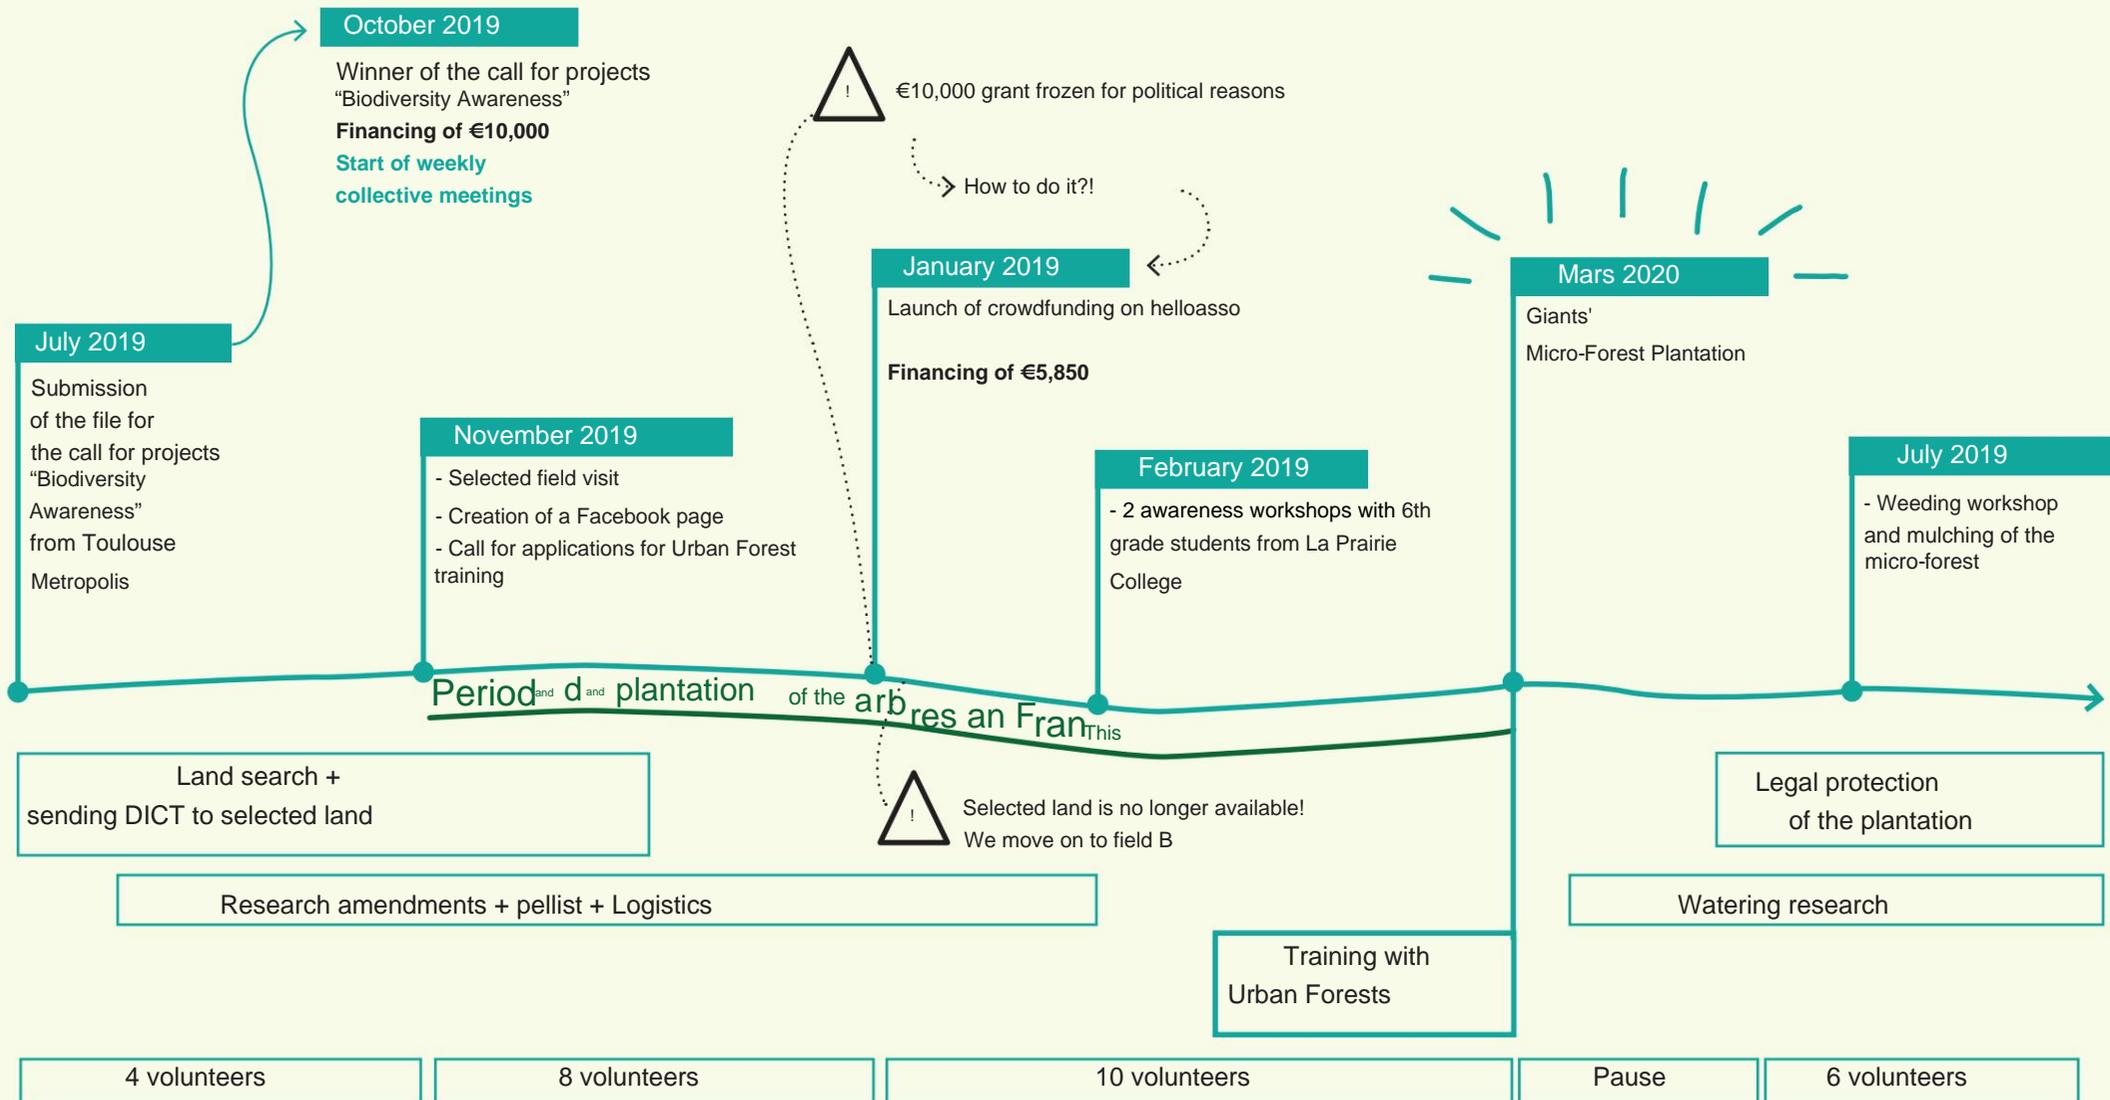

Chapter 4 - Soil preparation

Chapter 5 - Planting

Chapter 6 - The Cost

the micro-forest of giants

To help you plan ahead and as an example, we have illustrated the collective's work to create the giants' micro-forest in the form of a timeline.

and now ?

You have a preliminary idea of what a planting project involves. And you're not discouraged? Congratulations!

You will be able to immerse yourself in the different stages of a plantation corresponding to the different chapters of the Miyawa'kit. At any stage, we remain at your disposal to discuss your project.
